How to make PowerShell a real solution in 5 steps

Why?

Automation is important

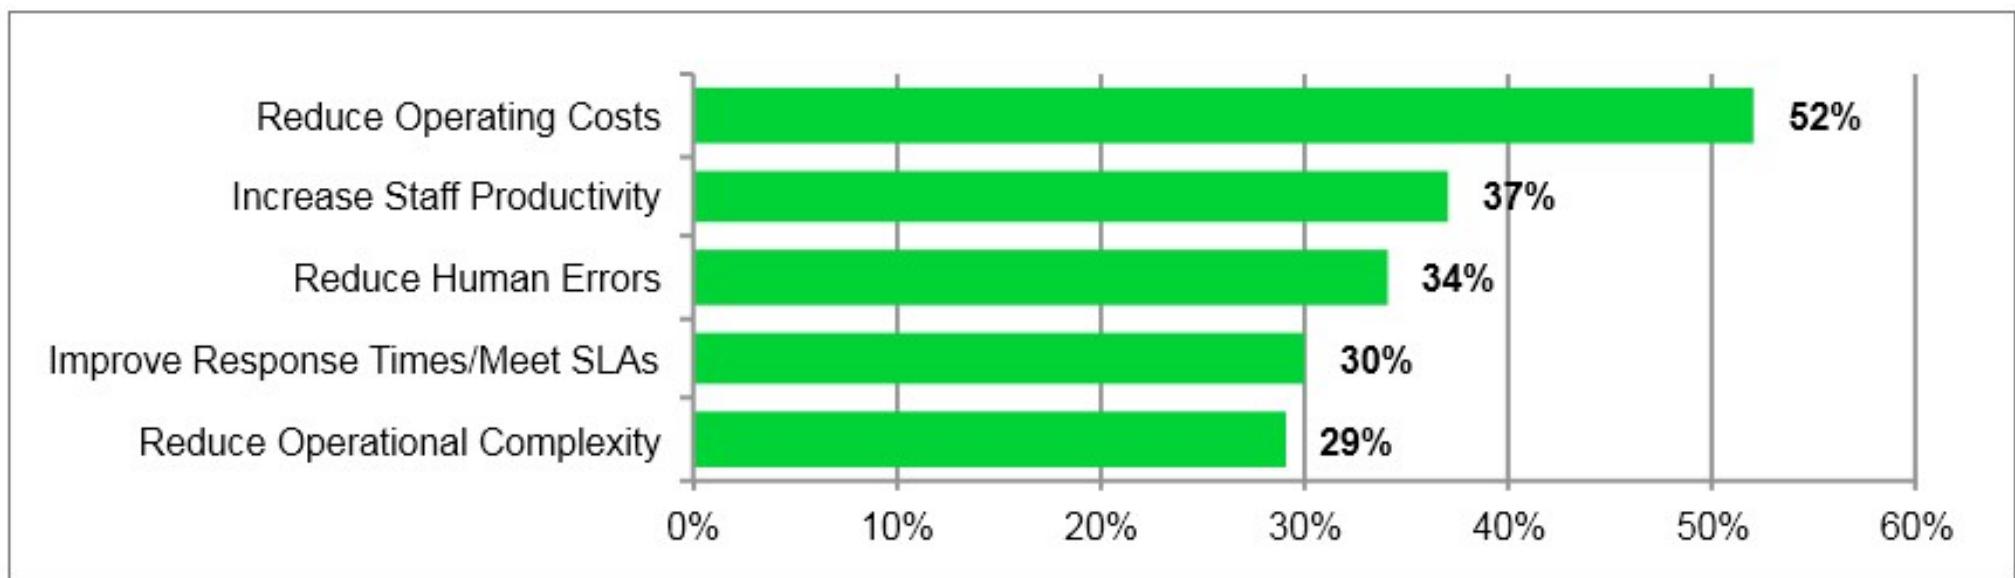

Figure 1 – Top business drivers for service automation

Quelle: EME Research Report – Data Center Automation in the Age of Cloud

Today's PowerShell Challenges

Many different variants of scripts
for same use case

Hard coded directory-,
file- or share-names in scripts

Scripts are stored in
many different places

„I have to install and maintain
the PowerShell modules on
too many machines“

„Who has the latest version of
the script?“

„Who has made the last changes
to the script?“

„Who ran the script to spin
up a new VM?“

No centralized reporting

„I would like to delegate recurring
tasks to the service desk team, but
I can't give them admin
permissions“

„When did the script to
delete logfiles on our servers
ran the last time?“

Credentials must be available
in different locations for
multiple users/scripts

„I can't delegate PowerShell scripts
because I'm the only one who
knows how to use PowerShell“

No secure & easy way for delegation

Four interesting questions

- 1. Does a task repeat itself? If so, how often?

- 2. How long does it take to complete this task?

- 3. How much does it cost to complete the task once?

- 4. Is the task prone to human error?

What?

What is ScriptRunner?

VS

Six reasons for centralizing PowerShell

Standardization

Collaboration

Control

Security

Delegation

Automation

Make PowerShell A Real Solution In 5 Steps

ScriptRunner – How to run scripts

Manually

Users execute tasks in web browser

Scheduled

Time-controlled tasks

Automatically

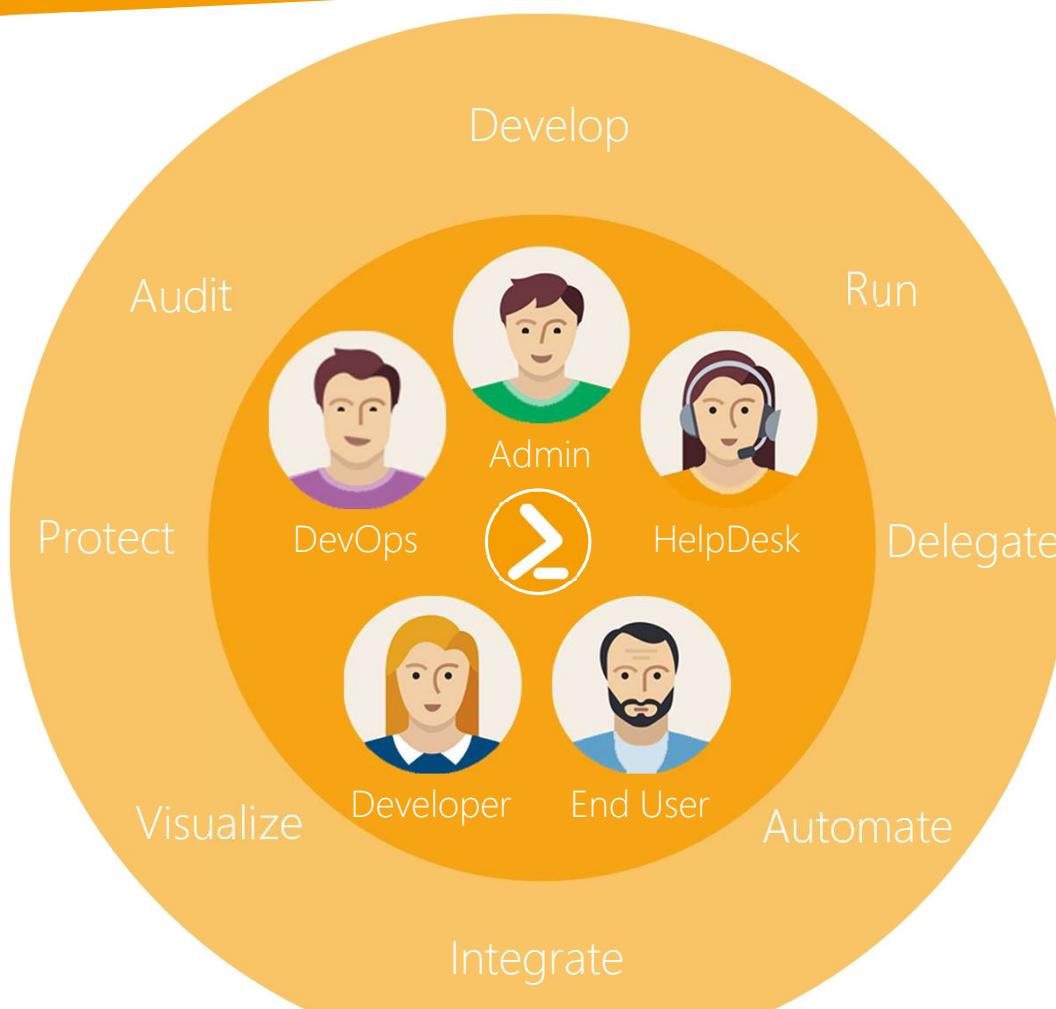

Triggered by 3rd party systems

ScriptRunner Demo

Our Solution In Action

ScriptRunner – Your Smart PowerShell Control Center

ScriptRunner – Practical Examples and Use Cases

Develop scripts in a team and organize them centrally

Standardize administrative team activities

Manage user accounts and groups quickly and easily

Reset password, unlock user, (de)activate accounts

Automated user provisioning and deprovisioning

Exchange – Allow or block mobile access with Active Sync

Exchange – Smart management of Out of Office settings

Exchange – Manage mailboxes and distribution lists

Manage rights to files, directories and file and printer sharing

Print Management – Manage print servers, printers and print jobs

Manage Azure AD and Office 365 easily and securely

Delegate software provisioning and offer it as self-service

ScriptRunner – Make PowerShell A Real Solution

The image displays a vertical stack of four colored panels representing different software components of the ScriptRunner solution:

- Top Panel (Grey):** Shows five circular icons representing user roles: Admin (green), DevOps (purple), Developer (blue), HelpDesk (orange), and End User (grey).
- Middle Panel (Orange):** Shows five white icons representing features: a target, a lock, a folder, binoculars, and a group of people. Below these icons is the ScriptRunner logo.
- Third Panel (Dark Blue):** Shows a large white icon of a script file with a greater-than sign (>).
- Bottom Panel (Dark Blue):** Shows logos for various integration partners: Windows, Docker, Elasticsearch, SharePoint, Microsoft Teams, Citrix, Oracle, Oracle Database, Docker, AWS, and an ellipsis (...).

ScriptRunner – How the components play together

<https://www.scriptrunner.com/en/software/system/>

ScriptRunner – Secure Delegation

<https://www.scriptrunner.com/de/software/system/>

ScriptRunner – The components

ScriptDeveloper

DevOps Plugin

SysAdmin

AdminApp

ServiceDesk

DelegateApp

EndUser

SelfServiceApp

Ready-made Scripts

ActionPacks

Integration

Connectors

ScriptDeveloper – DevOps Plugin

- ISE Plugin
- Team-based script development
- Central script repository
- Filters
- Check-in with history
- Check-out
- GitHub integration
- TFS integration
- More information
 - <https://www.scriptrunner.com/en/software/scripts/>

```
#ASR Parameter:ServiceDisplayName Type:Choice(ServicesList)
<#
.SYNOPSIS
Start a Windows service from the list.

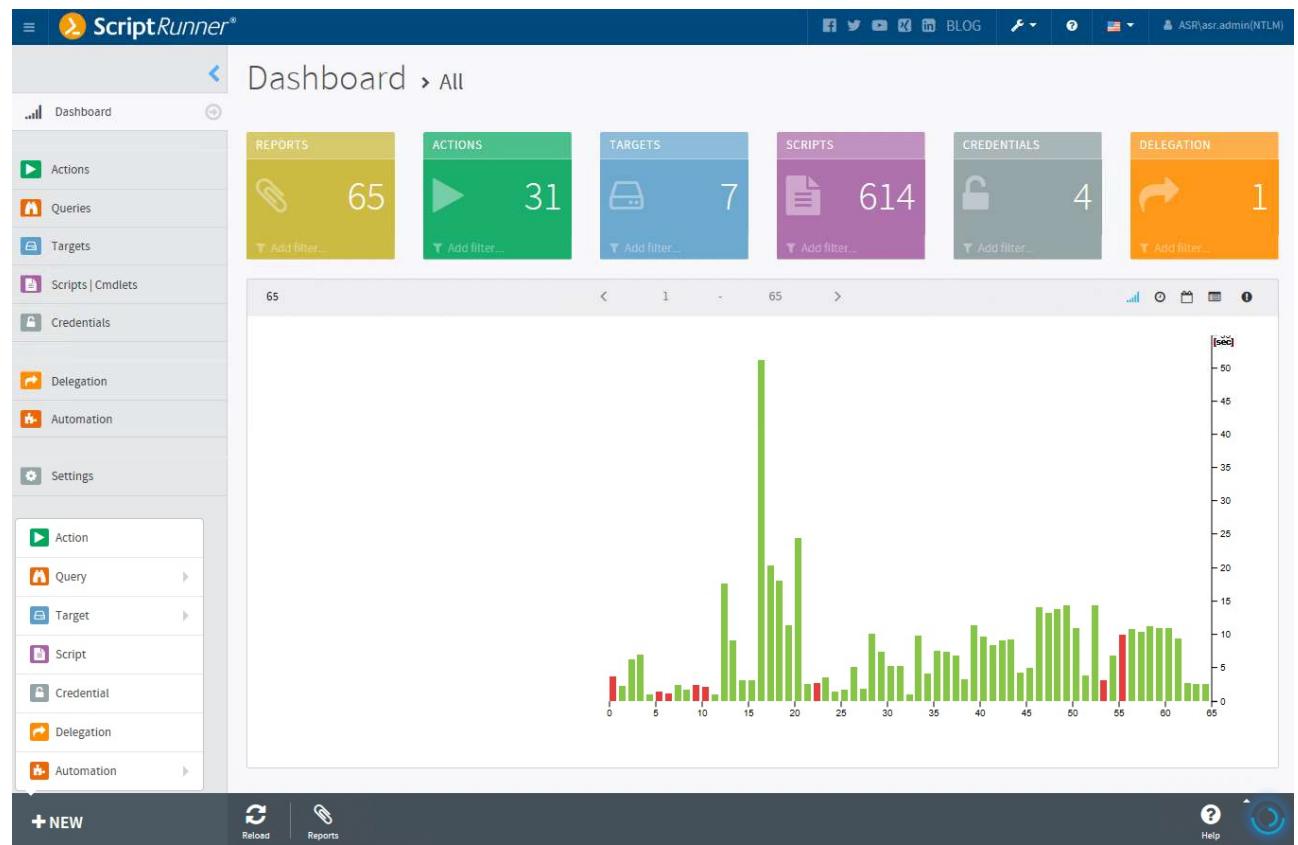

.PARAMETER ServiceDisplayName
The DisplayName of the service to start.

#>
Param (
    [Parameter(Mandatory=$true)]
    [string]$ServiceDisplayName
)
$name = $ServiceDisplayName.Substring(2)
Write-Host "Starting Windows service '$name'..."
Start-Service -DisplayName $name -PassThru
```

SysAdmin – Admin App

- A web GUI for PowerShell
- Dashboard for all activities
- Create ScriptRunner actions
- Manage and test queries
- Target configuration
 - Direct local
 - PowerShell remoting
 - Implicit remoting
- Secure delegation of ScriptRunner actions
- Scheduled script execution
- Secure credential handling
- Configure automation connectors
- Organizing by tags
- Reports and Logging
- More information
 - <https://www.scriptrunner.com/en/software/web-apps>

ServiceDesk – DelegateApp

- A web GUI for PowerShell
- Execute PowerShell scripts in the browser
- Delegate specific ScriptRunner actions to team members, helpdesk or endusers
- No administrative permissions for users required
- Parameters for script execution can be hidden
- Input dialogs are automatically created from PowerShell script
- Script execution logging and reporting
- More information
 - <https://www.scriptrunner.com/en/software/web-apps>

A screenshot of the ScriptRunner DelegateApp interface. The top navigation bar includes tabs for Favorites, All, ActionPacks, ActiveDirectory, BitLocker, Common, and Computers. On the right side, there are buttons for adding (+), deleting (-), and filtering (grid icon). A search bar is also present. The main area displays a grid of 16 action cards, each with a play button icon and a star icon. The actions are categorized as follows:

- Row 1: Add-MsUsersToRoles, Add-PrtMPrinterConnection, Clear-SysMEventLog, Copy-ADUser, dbgecho, Disk Info, Enable-SysMBitLocker, Enable-SysMLocalUser
- Row 2: Format-FillVolume, Get-ADComputersWithDefinedStatus, Get-ADUserProperties, Get-ExMailboxProperties, Get-SnapshotPropertiesFromHyperV, Get-SnapshotPropertiesFromVMware, Invoke-GitSync, Local: Add two values
- Row 3: Remove-PrintJob, Simulate Set-ADUserProperties Demo, Test-Cascaded ADQueries, Validation possibilities

At the bottom of the interface, there are 'Refresh' and 'Reports' buttons.

Ready-made Scripts – ActionPacks

- Easy implementation of many use cases
- Out of the box scripts for
 - Active Directory
 - Office 365
 - Exchange
 - VMWare
 - Hyper-V
 - Citrix
 - File-/PrintServer
- Scripts and templates for partner products
 - Paessler PRTG
 - Matrix42
 - Nagios
 - Automic ONE
- More informationen
 - <https://github.com/scriptrunner/ActionPacks>
 - <https://www.scriptrunner.com/en/software/script-sammlungen/>

Author	Commit Message	Time Ago
haraldpfirrmann	New query get printer drivers	Latest commit 74e2ba5 2 days ago
ActiveDirectory	Fixed	a month ago
DBSystems	Release Sql Server scripts	3 days ago
Exchange	Insert parameter hashtable	2 months ago
Hyper-V	Insert parameter hashtable	2 months ago
Q365	Securestring as parameter	4 months ago
VMware	Fixes	2 months ago
WinFileManagement	Insert parameter hashtable	2 months ago
WinPrintManagement	New query get printer drivers	2 days ago
WinSystemManagement	Insert parameter hashtable	2 months ago
README.md	Update file	3 months ago

ScriptRunner – Out-Of-Office example

	Actions	Activate OutOfOffice
	Queries	Select mailbox(es)
	Targets	Exchange, Exchange Online
	Scripts	Set-OutOfOffice.ps1
	Credentials	Service account with necessary permissions
	Delegation	Helpdesk user, End user

Integration – Add new functions with connectors

- 3rd party systems automatically trigger ScriptRunner Actions
 - Monitoring Systems
 - IT Service Management
 - Business Workflow
 - Applications
- Password server integration
 - CyberArk
 - Pleasant
 - Thycotic
- More information
 - <https://www.scriptrunner.com/en/software/automation-connector/>

ScriptRunner test report fom a Microsoft MVP

Adam Bertram aka Adam The Automator
Microsoft MVP Cloud and Datacenter Management

"ScriptRunner is a master of organizing, categorizing and delegating scripts."

"to get the same functionality of ScriptRunner, it would require several applications to get a similar feature set."

"ScriptRunner is a real DevOps tool for PowerShell scripters."

"If you are looking into automating your administration and support processes easily and securely, you will find a powerful and professional tool here."

"Compared to large automation platforms, ScriptRunner is significantly cheaper."

<https://www.adamtheautomator.com/scriptrunner-bringing-powershell-to-devops/>

Use cases with and without ScriptRunner

Case	Done by Admin (2nd/3rd Level)	Delegated with ScriptRunner to ServiceDesk, TeamLead or EndUser
Creating an user in AD	5 min	1 min
Reset User Password	2 min	1 min
Change User Props	4 min	1 min
Change of permissions	5 min	1 min
Create Mailbox	4 min	1 min
Change Mailbox Props	5 min	1 min
Set Out-of-office	not available	1 min Service Desk or TeamLead
User Statistics	10 min	0 min Service Desk (automatically)
Mailbox Statistics	10 min	0 min Service Desk (automatically)

Most of the cases are already included in the ScriptRunner Action Packs. By using the Action Packs you avoid 50 up to 250 hours script development time.

ScriptRunner: One Solution – Many Benefits

Manager
Teams become more productive

Deliver great scripts in a secure environment

DevOps

Administrator

Delegate recurring tasks and save time

HelpDesk

Develop scripts for more use cases/users

Developer

Self Services to solve my problems quickly

EndUser
